

# Tyro EFTPOS

## Terminal Deployment Requirements

### Deployment Process

To ensure a seamless deployment process, it is important to think through your requirements for the EFTPOS terminal set up and reporting structure.

There are several options:

### Multi - Merchant

Several Merchants can use the same terminal and still receive payments into their designated individual bank accounts.

### Multiple Locations

You can install Tyro terminals at multiple locations and receive payment into a single bank account.

Tyro's Online and Real-Time Reporting capability provides a company wide view of all terminals and all transaction details.

### Multiple Trade Names

You can have multiple trade names settled into a single bank account.

Multiple trade names with separate bank accounts are considered as separate Merchants.

### How to Apply

It is essential to include all multiple Merchants, location and/or trade name information on the application form.

### A separate Application for each Bank Account

If different business units have different bank accounts, a separate EFTPOS application **must** be completed for each bank account.

### Multiple Terminals with different Trade Names and / or Locations

If you have different trading names and/or trading addresses with funds settled into the same bank account, information for up to two additional terminals can be provided on the EFTPOS application form.

If there are more, you must advise Tyro via email to [support@tyro.com](mailto:support@tyro.com).

If you wish to generate reports showing terminals split into different terminal groups, with funds settled into the same account, you must advise Tyro via email to [support@tyro.com](mailto:support@tyro.com) on which terminals should be grouped together.

### Multiple Merchants on one Terminal

If more than one Merchant are sharing the same terminal, each Merchant **must** complete a separate EFTPOS application for each bank account that funds will be settled into.

Each application **must** include the SAME Group Name and the option of "Sharing the Terminal/Password within the group" must be chosen on the EFTPOS application.

### Amex and Diners Cards

If you accept American Express or Diners cards, please provide Tyro your Amex/ Diners ID for each separate location.
